The contractor's main task at present in trying to construct a single inverse complex hologram filter on microfile film. The most significant problem still to be solved in the reduction of noise in the reconstructed image. Her techniques in liquid gating are being attempted. The contractor is also starting the amaging of images in an "L" chaped puttern for which a filter hopefully can be found.		NARRATIVE REPORT	INTERIM .	☐ FINAL
complan helagram filtor on microfile film. The most significant problem still to be solved in the reduction of noise in the reconstructed image. New techniques in liquid gating are being attempted. The contractor is also starting the american of images in an "L" shaped puttern for which a filter hopefully can be found.				
still to be solved is the reduction of noise in the reconstructed image. Her techniques in liquid gating are being attempted. The contractor is also starting the america of images in an "L" chaped gettern for which a filter hopefully can be found.
